SUPPLEMENTARY TABLES BASED ON Y-SAMPLE
MEANS OF LIVELIHOOD AND INDUSTRIES TABLES.

INDIAN STATISTICAL INSTITUTE

1951.

Tables based on the Y-sample, Census of India, 1941

Madhya Pradesh

Means of Livelihood and Industry.

The census tabulation of 1941 was curtailed as a measure of retrenchment owing to the exigencies of the war by the elimination of a number of useful tables. Fortunately, however, the Y-sample of the original individual slips obtained by drawing out every fiftieth slip after sex classification was preserved, and the information in these sample slips were subsequently transferred to Hollerith cards. Age tables based on this sample have already been prepared for the state, and tables on Means of Livelihood and Industry based on the same sample are given here.

The Means of Livelihood tables have been prepared for the whole State and also for its constituent districts according to the present lay-out. In the State(Provincial) table, the number of independent or self-supporting persons having their principal means of livelihood in different occupational groups (classified according to the class of subsidiary means of livelihood, if any) are shown. The number of partly dependents following any specified occupation as their supporting means of livelihood is also given. In the district tables, however, such information is given only by broader occupational groups.

The table on Industrial classification of persons is prepared only for the State as a whole. This shows the number of workers(employees) engaged in the different Industries(groups) classified according to the class of worker.

Owing largely to conditions created by the war, the Y-sample could not be properly stored after extraction, and as a consequence the available sample was slightly defective. Adjustments have been made to eliminate as far as possible, the effect of such defects on the basis of the information already published in the Census Report.
